

(e) Surface-roughness mobility factor, model V1

What is plotted

Factor by which surface roughness reduces the mobility of a thin film: the ATLAS mobility is $\mu_0 = \mu_{band} (1 - \Delta_{sr}/t)^2$. Values at the measured films: 0.734 / 0.911 / 0.957.

References

[1] Januar et al., Small Struct. 7, e202500807 (2026), Sec. 2.9 and Fig. 5f: effective roughness $\Delta_{sr} = 2.87 \text{ \AA}$ from the fit of mobility against thickness.
