

Post hoc, descriptive. One-decade windows with $|\text{SS}_{\text{TCAD}} - \text{SS}_{\text{meas}}| \leq 5$ mV/dec, upper edge $\leq 10^{-9}$ A/ μm ; lower edge $\geq 10 \times$ floor (top row) or $\geq 1 \times$ floor (bottom row, assumes an additive, gate-independent floor). Dotted: measured floor; dash-dot: lowest admissible edge. Filled symbols: measured points inside the agreement range.
